

RentFlow

Week 2 Progress Update — 30 September 2026 — Advanced Computer Programming Mini Project, KMITL

What RentFlow is

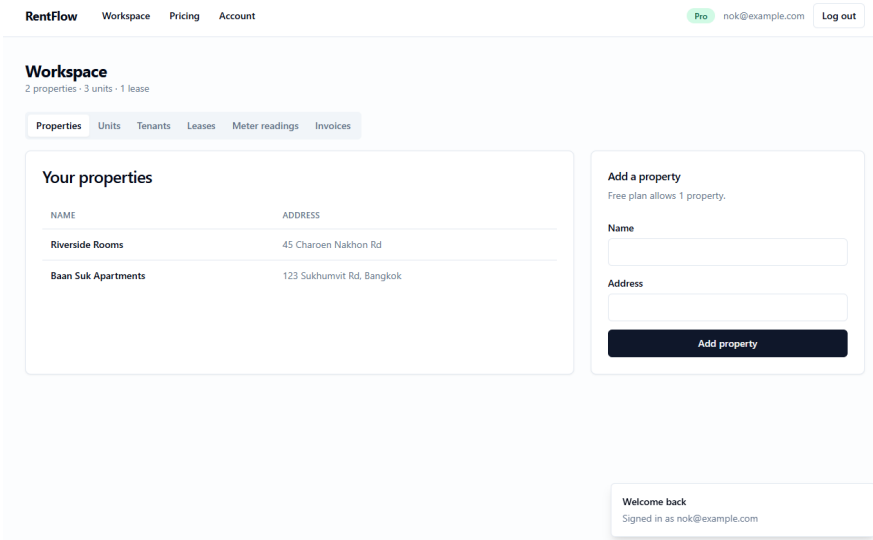

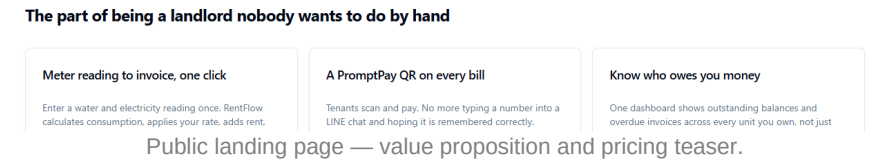

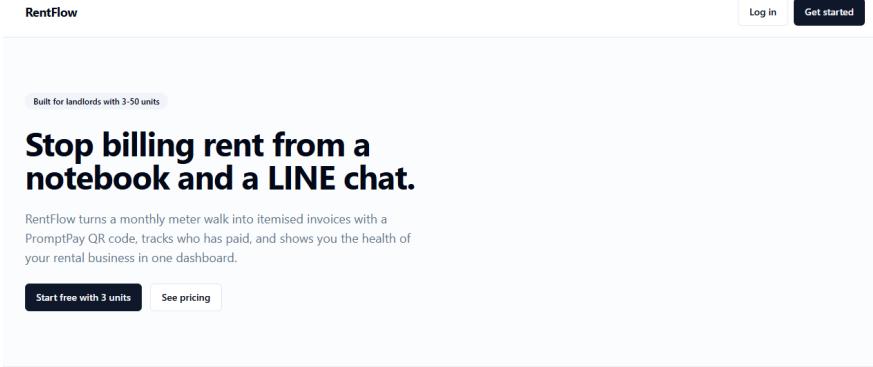

Rent and utility billing software for landlords who own 3–50 units and are still running the business from a notebook, a calculator, and a wall of LINE chats. RentFlow turns a monthly meter reading into an itemised invoice with a PromptPay QR code, tracks who has paid, and shows the business (both the landlord's and RentFlow's own) on one dashboard.

Progress against the Week 2 checkpoint

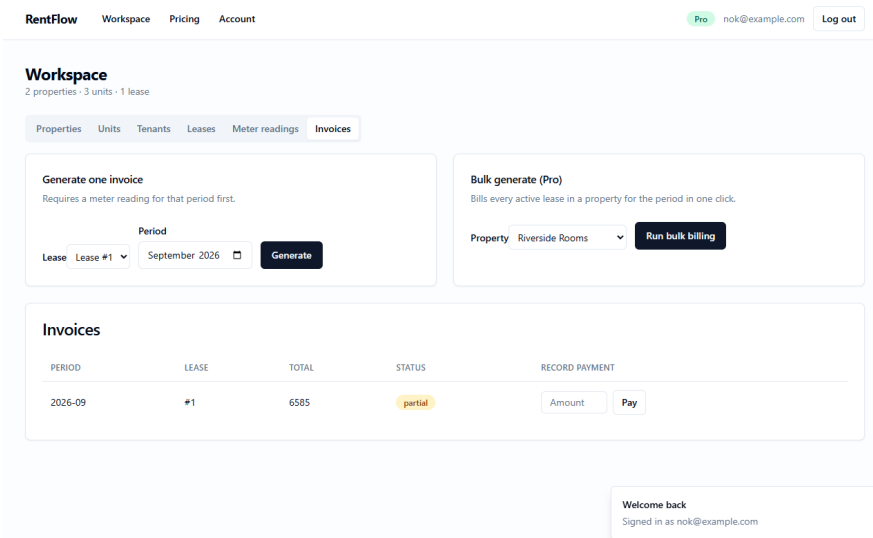

Target: 2–3 pages / 40% app completion — JWT authentication and RBAC working, landing page + auth page + workspace shell built, skeleton deployed. Status below.

- **Database:** full PostgreSQL schema live — 10 tables (users, properties, units, tenants, leases, meter_readings, invoices, invoice_lines, payments, transactions) with foreign keys down the full ownership chain.
- **Authentication & RBAC:** JWT login/register, Admin vs. User roles, and Free vs. Pro subscription tiers enforced *server-side* (not just hidden UI) — e.g. a 4th unit or 2nd property is rejected with HTTP 402 on the Free plan.
- **Billing engine:** working end-to-end — meter reading → consumption → itemised invoice, with mid-month lease proration, late fees on prior unpaid balances, partial payments, and rejection of a meter reading that goes backwards. 13 unit tests passing.
- **Monetization:** real EMVCo-format PromptPay QR checkout that upgrades a landlord's tier on confirmation.
- **Frontend:** all six required pages built and wired to the API — landing page, auth, main workspace (properties/units/tenants/leases/meters/invoices), pricing & checkout, account, and an admin analytics dashboard with live charts.
- **Not yet built** (planned for Week 3–4 per the proposal): LINE tenant notifications, PDF invoice/receipt export, live cloud deployment.

The screenshots on the following pages were taken from the running application against a live PostgreSQL database, not mockups.

Main workspace: a landlord's properties, with tabs for units, tenants, leases, meter readings, and invoices.

Invoices tab: an auto-generated invoice showing a **partial** payment status after a part-payment — the billing engine correctly withholds 'paid' until the balance clears.

Plans

Unit-based pricing: the gate binds when your portfolio grows, not before.

Free

฿0

- Up to 3 units
- Manual invoice generation, one at a time
- PromptPay QR on every invoice

Pro

฿299/month

Current plan

- Unlimited units and properties
- Bulk monthly invoice run
- Automatic utility calculation from meter readings
- PDF invoice and receipt export
- LINE notifications to tenants
- Payment history export

Pricing page: Free vs. Pro plans. This account has just upgraded via the PromptPay checkout flow.
